ABSTRACT

This Kids Count data book examines trends in the well-being of California's children, focusing on factors influencing adolescents. The statistical portrait is based on trends in 33 indicators of well-being in 4 areas: (1) family economics, including child poverty rate, median family income, youth unemployment, children in families receiving TANF, child hunger, child care, and child support; (2) health, including uninsured children, Medi-Cal and Healthy Families enrollment, teen births, smoking, drug use, mental health, prenatal care, and infant mortality; (3) education, including high school dropout rate, reading and math skills, per pupil expenditure, and children in Head Start; and (4) safety, including child abuse and neglect rates, foster care, gun violence, juvenile incarceration, and youth homicide. The data book's introduction details key findings, discusses data interpretation, and makes recommendations for public and private organizations, parents, and local communities. The first part of the data book details findings for each indicator, focusing on national averages and California's state rank, and on trends from the mid- to late-1990s. Racial/ethnic differences in indicators are presented when available. The second part contains summary tables organized by indicator detailing state

and county findings. The data book's findings indicate that currently teens are more likely to complete high school, less likely to be unemployed, and less likely to become parents at an early age than were teen several years ago. Compared to teens in other states, California teens are less likely to have health insurance and more likely to be incarcerated. African American and Latino youth experience significantly worse outcomes than other youth on many measures. (KB)

Introduction

California is in the middle of a decade of change, during which our adolescent population (youth ages 10 to 17) will increase by 36 percent to nearly five million (4.7) total by 2005. This growth rate is 2.2 times greater than that of California's overall population and three times greater than the nation's overall population. Our adolescent population will be more diverse than ever before, with 7% African American, 12% Asian/Pacific Islander, 42% Latino and 38% white.

What will these changes mean for our state? Will we capitalize on young people's strengths and build upon their resiliency, creativity and energy? Will the years ahead be a productive time in which new public and private sector initiatives give teens more opportunities to develop their skills and enrich their lives? Or will these years be a time of indifference on the part of adults, hoping that teens and communities make it through this period with the least possible difficulties?

While today there are laudable examples of programs around the state making a difference in young people's lives—by helping them stay in school, develop their skills, exert their leadership and contribute to the community—there is no concerted statewide effort to bolster the chances of today's youth.

How Young People Are Faring Today

This report and accompanying *Report Card* show that in a number of areas, California's young people are doing better today compared to several years ago. Teens are more likely to complete high school, less likely to be unemployed and less likely to become parents at an early age.

But, compared to teens in other states, California teens are more likely to live in families who struggle economically and they are less likely to have health coverage. The state also incarcerates young people at a rate higher than that of nearly every other state.

Additionally, there is a troubling disparity: African American and Latino youth experience significantly worse outcomes in many economic, health, education and safety measures. For example, Latino children are more than twice as likely to be poor and to lack health coverage compared to white children; African American youth are more than twice as likely to drop out of school and the state is more than 6 times more likely to incarcerate them compared to white youth. While data on Asian/Pacific Islander youth show outcomes often close to the state average, there are certain sub-groups within this population that are not faring well. Better data for these sub-groups is necessary to gain a clearer understanding of their particular challenges and needs.

Not only is California falling behind many other states in fostering young people's capacity to achieve their potential when considering the population overall, but we have especially far to go with Latino youth, where our population growth will be greatest.

The Current Political Environment

On the positive side, new state-level attention to funding K-12 education, combined with a strong economy, have resulted in substantial new resources dedicated to young people's education. Also, at the state and federal levels, momentum is gaining around funding more after-school programs for children and youth, as policymakers realize the growing need among today's working families.

However, there is also evidence that fearful impressions of young people have led many Californians to endorse a highly punitive approach to certain youth, rather than strengthening the preventive measures that have been shown to be effective. In March 2000, voters approved Proposition 21, which stiffened penalties for juvenile offenders and made it possible to imprison more teens in adult facilities. In response, the Legislature proposed allocating \$121 million for prevention services, which was vetoed by Governor Davis.

While California has increased its attention and commitment to promoting the healthy development of very young children, relatively few state and local efforts have been undertaken to promote adolescent well-being.

California must not merely sit by as a generation of adolescents—unprecedented in its size and diversity—grows up in our communities. We must listen to them, work together to address their challenges and invest our resources in their future.

Where Do We Go From Here?

Securing more opportunities for adolescents and achieving better outcomes requires multiple efforts from the public and private sectors at the state and local levels, parents and caring members of the community. The recommendations detail next steps for all Californians to consider.

Recommendations

Children Now recommends action that can be taken to capitalize on the exciting potential of California's youth:

In the Public Sector

- Recognize the disparities among outcomes for teens of different racial, ethnic and socioeconomic groups and sub-groups, and set goals for the elimination of these disparities through data development and collection, program planning and service delivery. Allocate the necessary resources to meet these goals.
- Talk to young people as you develop plans and programs; listen to their concerns and seek their input in creating solutions.
- Assure that new high school achievement standards are paired with significant school improvement efforts and remediation programs, such that all students have a good chance of meeting the expectations.
- Expand adolescents' access to high-quality enrichment programs during out-of-school hours.
- Enact measures to increase adolescents' access to health care and improve the quality of the health care that teens receive.
- Support prevention-oriented approaches to juvenile delinquency.
- Improve data collection systems so that more comprehensive information on important issues for children and youth are publicly available.

In the Private Sector

- Explore ways that your dollars, other resources and expertise can improve young people's education and skills development.
- Inform policymakers about how your company benefits from a well-prepared workforce and the need for investments in young people today.
- Create company policies that recognize that parents of adolescents have as much need for support as parents of young children.

Local Communities

- Map your community's assets and gaps in meeting the diverse needs of its youth population.
- Work through a representative and collaborative process to establish priorities for meeting youth's needs. Be certain to include a substantial number of youth in this effort.
- Share your community's commitment and needs with state policymakers.

Parents

- Talk with your teens, listen to their concerns and share your perspectives and values. Helpful materials about talking to pre-adolescents about tough issues are available by calling **1-800-CHILD-44**.
- Get involved in your child's education; talk with their teachers; assist them with home-

work or help them get assistance from others.

- If you are unavailable to supervise your child's after-school activities, form a partnership with your extended family, other parents or neighbors to share the responsibility.
- Communicate your experiences and concerns with state and local policymakers; talk to them about what is needed for young people in your community.

All Californians

- Mentor a young person or share your skills with a group of young people.
- Counter stereotypes about adolescents that you hear in conversations or see in the media.
- Communicate to state policymakers your commitment to young people's well-being; sign up for *Children Are Watching Now* monthly alerts and commit to taking action once a month. Visit **www.childrennow.org** or call **510-763-2444**.

Family Economics

Indicators

1. Children in poverty
2. Low-income children
3. Median income of families
4. Unemployed youth
5. Children receiving TANF
6. Hungry children
7. Child care
8. Child support

1. Children in poverty

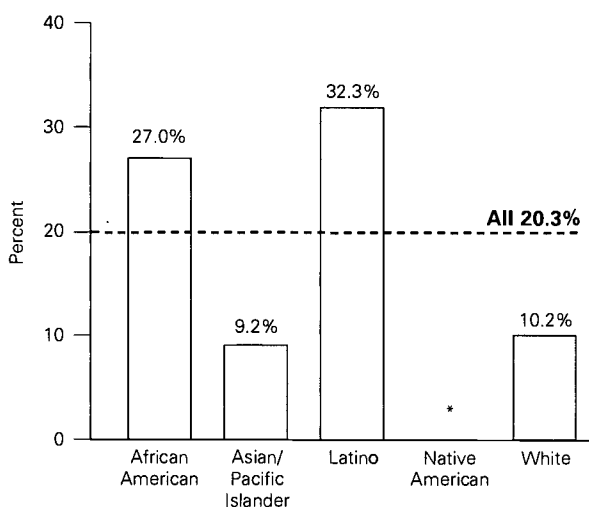

This indicator represents the percentage of children under the age of 18 living at or below the poverty level. The poverty threshold for a family of four with two children was \$16,700 in 1999.

California Trend

	1996	1997	1998	1999
Poverty rate	25.5%	25.5%	23.6%	20.3%
Children in poverty (in millions)	2.3	2.4	2.2	1.9

National Data: 16.9% of all children under 18 were poor in 1999. In 1996, 20.5% of all children were poor.

Children in Poverty by Race/Ethnicity, California, 1999

* Due to small numbers, reliable rates cannot be calculated.

State Rank: The percentage of children living below the poverty level remains high in California relative to other states. California's average year rank between 1997 and 1999 was 45th of 50 states and the District of Columbia. Its average year rank between 1994 and 1996 was also 45th of 50 states and the District of Columbia.

Sources: U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 2000; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1999; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1998; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1997.

2. Low-income children

This indicator represents the percentage of children and young adults under the age of 19 living at or below 200% of the poverty level, or \$32,900 for a family of four in 1998.

California Trend

	1995	1996	1997	1998
Low-income children	48.8%	48.1%	47.2%	46.7%
Number (in millions)	4.7	4.5	4.6	4.5

State Rank*: Children in Poverty

1994-96		45th of 51				
1997-99		45th of 51				
1 Best		10	20	30	40	Worst 51

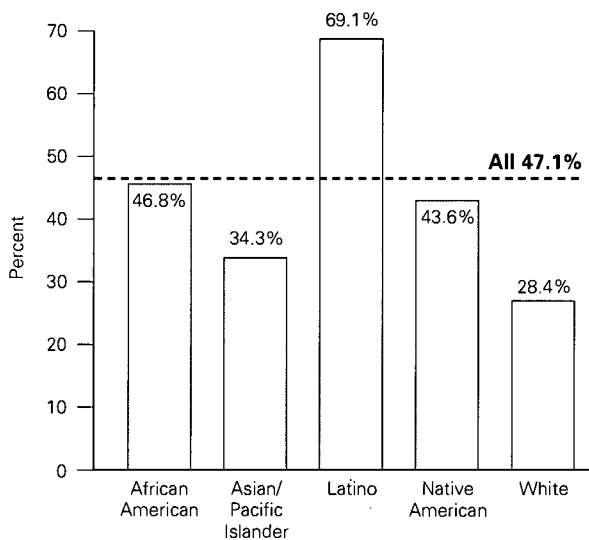

* Due to the limited sample size of the primary source, the Current Population Survey, for this poverty data, 3-year average state rankings are more reliable than single year state rankings.

National Data: 39.8% of all children and young adults under 19 years of age lived in low-income families in 1998, an improvement from 43.0% in 1995.

State Rank*: California's average year low-income children rank between 1996 and 1998 was 41st of 50 states and the District of Columbia. Its average year rank between 1993 and 1995 was also 41st of 50 states and the District of Columbia.

* Due to the limited sample size, 3-year average state rankings are more reliable than 1-year state rankings.

**Low-income (under 200% of poverty)
Children By Race/Ethnicity,
California, 1998***

* Race/ethnicity data come from the Current Population Survey (CPS) as calculated by California Department of Finance. Therefore, these data are slightly different from the

trend data presented, which were calculated by the United States Census Bureau.

Sources: U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1999; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1998; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1997; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1996.

3. Median income of families

This indicator represents the median yearly income for a four-person family.

California Trend

	1995	1996	1997	1998
Income	\$51,519	\$53,807	\$55,217	\$55,209

National Median Income: The median income for a four-person family in 1998 was \$56,061 nationally, compared to \$49,687 in 1995.

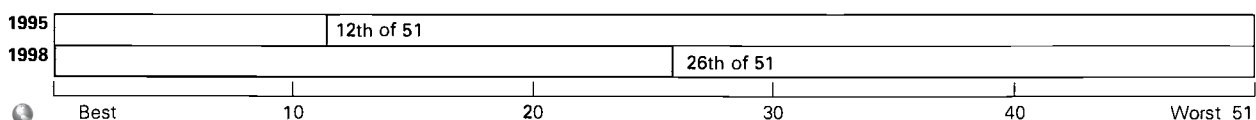

State Rank: In 1998, California's ranking declined to 26th among 50 states and the District of Columbia, compared to 12th in 1995.

Continued on next page

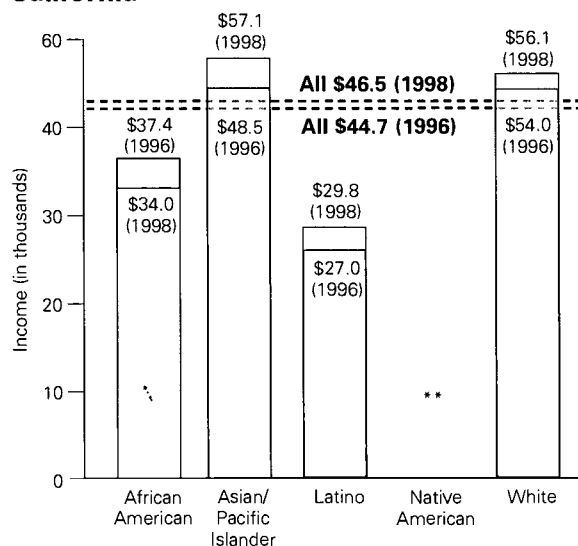

State Rank: Low-income Children

State Rank: Median Income of Families

Median Family Income by Race/Ethnicity, California*

* Race/ethnicity median income data are available for *all* family households only. Therefore, these data are distinct from the trend data presented, which are median income for a *four-person* family household.

** Due to limited survey sample size, reliable Native American median income data are not available.

Sources: U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1999; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1998; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1997; U.S. Bureau of the Census, Housing and Household Economic Statistics, Population Branch, data from Current Population Survey, March 1996, available online: <http://www.census.gov/hhes/income/4person.html>.

4. Unemployed youth

This indicator represents the number and percentage of 16- to 19-year-olds who are unemployed and are actively looking for work.

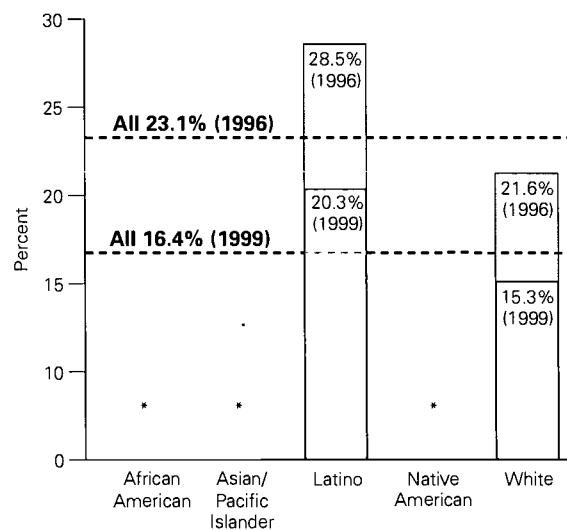

California Trend

	1996	1997	1998	1999
Unemployed youth	23.1%	20.6%	18.5%	16.4%
Number (in thousands)	177	152	159	139

National Data: 13.9% of youth 16-19 years old were unemployed and looking for work in 1999. In 1996, 16.7% of all youth were unemployed and looking for work.

State Rank: In 1999, California ranked 37th of 50 states and the District of Columbia in the percentage of unemployed youth 16-19 years old, compared to 47th of 50 states in 1996.

Unemployed Youth by Race/Ethnicity, California

* The Current Population Survey, the primary source for these data, does not support data analyses for these race/ethnic groups due to sample size limitations.

State Rank: Unemployed Youth

1996		47th of 50
1999		37th of 51

1 Best 10 20 30 40 Worst 51

Sources: U.S. Department of Labor, Bureau of Labor Statistics, *Geographic Profile of Employment and Unemployment*, 1999; U.S. Department of Labor, Bureau of Labor Statistics, *Geographic Profile of Employment and Unemployment*, 1998; U.S. Department of Labor, Bureau of Labor Statistics, *Geographic Profile of Employment and Unemployment*, 1997; U.S. Department of Labor, Bureau of Labor Statistics, *Geographic Profile of Employment and Unemployment*, 1996.

5. Children receiving TANF

This indicator represents the average monthly number and percentage of all children ages 0-17 and adolescents ages 10-17 receiving Temporary Assistance to Needy Families (TANF), formerly Aid to Families with Dependent Children (AFDC).

California Trend

	1995-96	1996-97	1997-98
Percentage of all children 0-17 receiving TANF	20.2%	16.7%	15.2%
Number (in millions)	1.8	1.5	1.4
Percentage of all children 10-17 receiving TANF	16.8%	14.4%	10.8%
Number	600,000	528,000	399,000

National Data: A monthly average of 5.0 million children, 7.2% of all children ages 0 to 17, received TANF services during fiscal year 1999 (October 1998 to September 1999). This is a decrease from 6.0 million and 8.7% during fiscal year 1998 (the first year for which complete participation data in the new public assistance program were available). Prior to the implementation of the Personal Responsibility and Work Opportunity Reconciliation Act (PROWA) of 1996, 8.5 million children and 12.3% of all children in this age group received public assistance during fiscal year 1996.

A monthly average of 1.5 million children ages 10-17 (4.7%) received TANF during fiscal year 1999, compared to 2.0 million children ages 10-17 (6.5%) who received public assistance during fiscal year 1998. Prior to the implementation of the PROWA, 2.7 million (9.0%) children ages 10-17 received public assistance during fiscal year 1996.

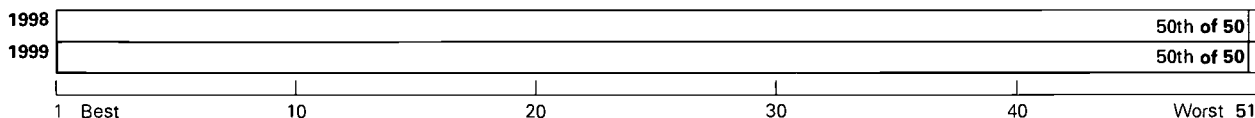

State Rank:

Children Ages 0-17: In 1998-99, California ranked 50th of 50 states in the percentage of all children ages 0-17 receiving public assistance. In 1997-98, California also ranked 50th of 50.

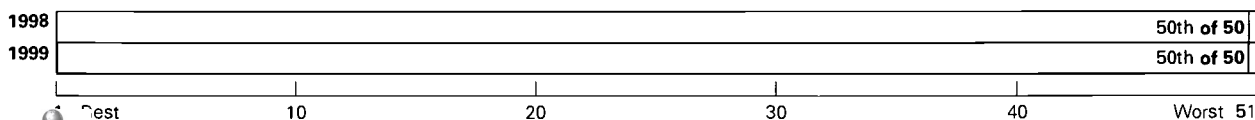

Children Ages 10-17: In 1998-99, California ranked 50th of 50 states in the percentage of all children ages 10-17 receiving public assistance. In 1997-98, California also ranked 50th of 50.

6. Hungry children

This indicator represents the number of children and families who experience “food insecurity,” that is, who are not “assured access to enough food for an active, healthy life,” as defined and measured by the U.S. Department of Agriculture.

California Trend

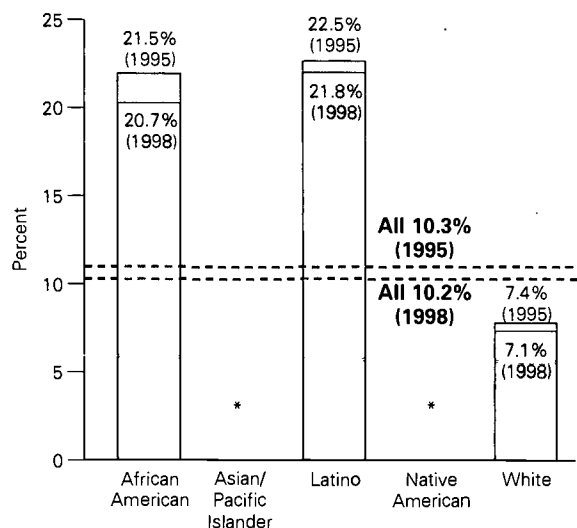

No one agency or organization takes an annual count of “hungry children” in California. The Food Security Supplement to the Current Population Survey (CPS), the principal survey used to determine state and national poverty estimates, allows for data estimates of “food insecurity” among all California households only.

	1995	1996	1997	1998
Percent	14.4%	12.6%	9.5%	12.2%

National Data: In 1998, 10.1% of all households experienced food insecurity, compared to 11.9% in 1995. Additionally, the CPS Food Security Supplement allows for estimates of “food insecurity” among households with children at the national level. In 1998, 15.2% all households with children under 18 years of age experienced some level of food insecurity, compared to 15.4% in 1995.

State Rank: California’s average year rank between 1996 and 1998 was 41st of 50 states and the District of Columbia in the percent of all households experiencing food insecurity.

Prevalence of Food Insecurity by Race/Ethnicity, United States*

* The Current Population Survey, the primary source for these data, does not permit data analysis for race/ethnic groups at the state level or for Asian/Pacific Islander and Native American categories at the national level.

Sources: U.S. Department of Agriculture, Food and Nutrition Service, *Measuring Food Security in the United States: Prevalence of Food Insecurity and Hunger, by State, 1996-98*, September 1999; U.S. Department of Agriculture, Food and Nutrition Service, *Measuring Food Security in the United States: Household Food Security in*

7. Child care

This indicator represents the number of children ages 0-14 years, whose families need subsidized child care and the percentage being served in subsidized programs.

California Trend

There is no annual count of all children in California whose families need affordable child care.

- A 1998 report of the California State Little Hoover Commission estimated that California is serving only 25% of those eligible for and in need of subsidized child care services.
- From October 1997 to September 1998, California provided subsidies to just over 311,000 children through state and federal assistance programs.
- The Child Care and Development Fund is the major source of federal child care assistance for low- and moderate-income families. The program provides funding to states to subsidize care of the parent's choice, whether in a family child care home, with a relative or in a child care center. Between April and September of 1998, California served 100,640 children through this program, only 7.3% of all children eligible under state rules in effect in October 1997 and just 5.8% of children who would be eligible if

state eligibility limits were raised to the federal maximum.

National Average: Data are limited at the national level as well. Between April and September of 1998, 1.5 million children (just 10.3% of those potentially eligible) received child care services nationwide through the federal Child Care and Development Fund for low- and moderate-income families.

State Rank: Not available.

In 1998, the only year for which data are available, California ranked 46th of 49 states and the District of Columbia in the percentage of children served through the federal Child Care and Development Fund of all children eligible for services.

Sources: Milton Marks Commission on California State Government Organization and Economy, Little Hoover Commission, *Caring for Our Children: Our Most Precious Investment* (Sacramento, CA: September 1998); Unpublished data from California Department of Education, Child, Youth, and Family Services Branch, *Estimated Children Served by Program Type*, February 2000; U.S. Department of Health and Human Services, Administration for Children and Families, Child Care Bureau, *Access to Child Care for Low-Income Working Families*, December 1, 1999, available online: <http://www.acf.dhhs.gov/programs/ccb/research/ccreport/ccreport.html>.

8. Child support

This indicator represents the percentage of cases in the state child support system for which some money has been collected. This figure reflects the collections as a percentage of all cases, recognizing that even cases without orders in place represent children awaiting child support.

Continued on next page

California Trend

	1995	1996	1997	1998
Percent	13.9%	17.2%	21.8%	28.1%*

* Estimate based on Department of Health and Human Services' preliminary report.

National Average: 22.1% of all child support cases under the United States Office of Child Support Enforcement received some support in 1998. In 1995, 19.0% of all cases received some payment.

State Rank: In 1998, California ranked 15th of 50 states and the District of Columbia, a marked improvement from 1995 when it ranked 42nd. However, over 7 in 10 families owed child support in California do not receive any payments.

Sources: U.S. Department of Health and Human Services, Administration for Children and Families, Office of Child Support Enforcement, *23rd OCSE Annual Report, Preliminary Data, Table 4*; U.S. Department of Health and Human Services, Administration for Children and Families, Office of Child Support Enforcement, *22nd OCSE Annual Report, Tables 32 and 34*; U.S. Department of Health and Human Services, Administration for Children and Families, Office of Child Support Enforcement, *21st OCSE Annual Report, Tables 32 and 34*; U.S. Department of Health and Human Services, Administration for Children and Families, Office of Child Support Enforcement, *20th OCSE Annual Report, Tables 32 and 34*, available online: <http://www.acf.dhhs.gov/programs/cse/prgrpt.htm>.

1. Uninsured children

This indicator represents the percentage of children under 18 who had *no* health insurance coverage, public or private, through an entire year.

California Trend

	1995	1996	1997	1998
Percent	17.4%	17.8%	18.3%	20.4%
Number (in millions)	1.6	1.6	1.7	1.9

Note: The trend data above are different from data for uninsured children under 19, which total over 2 million uninsured children in 1998.

National Average: In 1998, 15.4% (nearly 11.1 million) children lacked insurance, an increase from the 13.8% of children (9.8 million) who lacked health insurance in 1995.

State Rank: California's average year rank between 1996 and 1998 was 43rd of 50 states and the District of Columbia, compared to 44th of 51 states between 1993 and 1995.

Percent Uninsured by Race/Ethnicity, California 1998*

* Reflects data for children 0-18 years old.

** Estimates for African American children are two-year averages of March 1998 and March 1999 Current Population Survey data, which are more precise than one-year estimates.

*** Not available.

Sources: U.S. Bureau of the Census, Housing and Household Economic Statistics Division, *Health Insurance Coverage Status and Type of Coverage by State-Children Under 18: 1987 to 1998*, table HI-5; HH Schauffler and ER Brown, *The State of Health Insurance in California, 1999* (Berkeley, CA: Regents of the University of California, January 2000).

2. Children enrolled in Medi-Cal and Healthy Families

This indicator represents the number of children under 19 enrolled in Medi-Cal and Healthy Families, two state and federally funded health insurance programs for low-income families.

State Rank: Uninsured Children

1993-95		44th of 51
1996-98		43rd of 51

1 Best 10 20 30 40 Worst 51

California Trend

Medi-Cal

	1996	1997	1998	1999
Number (in millions)	2.9	2.7	2.6	2.7

The above figures are for July 1996, July 1997, July 1998 and July 1999, respectively. As of November 1999, 838,000 uninsured children ages 0-18 were eligible for health insurance coverage under the Medi-Cal program.

Healthy Families

	1999	2000
Number enrolled	134,776	302,935
Number disenrolled	3,241	59,411

The above figures are as of July 1999 and July 2000 respectively. As of November 1999, 639,000 uninsured children ages 0-18 were eligible for health insurance coverage under the Healthy Families program.

Data for children eligible but not enrolled are not available through the California Department for Health Services. However, according to a 1999 University of California, Los Angeles, Center for Health Policy Research report, 1.5 million children are eligible for Medi-Cal or Healthy Families but uninsured.

National Average: The legislation that created the federal State Child Health Insurance Program (SCHIP) was signed into law by President Clinton in 1997. The legislation appropriates \$24 billion over five years to help states expand health insurance to children whose families earn too much to qualify for Medicaid, yet not enough to afford private health insurance. Under the legislation, families up to 200% of the Federal Poverty Level (\$33,400 for a family of four in 1999) are eligible for coverage. States were given the option to create new programs to implement the legislation or expand existing state Medicaid pro-

grams. States were also given the flexibility to expand health coverage for children whose families earned over 200% of the Federal Poverty Level.

During the federal fiscal year ending September 30, 1998, over 20.8 million children and youth ages 0-20 were enrolled in Medicaid nationwide. Additionally, during the federal fiscal year ending September 30, 1999, over 1.9 million children were enrolled nationwide in SCHIP.

The Census Bureau estimates that nearly 30 million U.S. children (39.8%) ages 0-18 live in families whose income is at or below 200% of poverty.

State Rank: SCHIP data are not comparable due to differences in eligibility and program implementation across states.

Sources: Unpublished data from California Department of Health Services, Medical Care Statistics Branch, August 2000; Unpublished data from Managed Risk Medical Insurance Board, Information Systems Unit, 1999 and 2000; HH Schauffler and ER Brown, *The State of Health Insurance in California, 1999* (Berkeley, CA: Regents of the University of California, January 2000); U.S. Department of Health and Human Services, Health Care Finance Administration, *Aggregate Enrollment Statistics for FY 1998, Table 22*, January 2000.

3. Teen births

This indicator represents the number of births to females ages 15-19 per 1,000 females in that age group.

California Trend

	1995	1996	1997	1998
Rate (per 1,000)	67.2	61.6	56.7	53.2

A total of 58,141 babies were born to California teenagers ages 15-19 in 1998.

Continued on next page

National Average: In 1998, the teenage birth rate was 51.1 per 1,000, a 10 percent decline from 56.8 in 1995.

State Rank: In 1998, California ranked 34th of 50 states and the District of Columbia, an improvement from its 41st ranking in 1995.

Teen Birth Rates* by Race/Ethnicity, California

	1990	1995	1998
African American	109	88	68
Asian/Pacific Islander	29	26	20
Latino	111	121	97
Native American	67	77	65
White	43	33	25
All	70	67	53

* 1995 and 1998 data for white teens excludes "Other" races and ethnicities.

Sources: Unpublished vital statistics data from California Department of Health Statistics, Office of Health Information and Research, Vital Statistics Section, May 2000; Centers for Disease Control and Prevention, National Center for Health Statistics, "Variations in Teenage Birth Rates, 1991-1998: National and State Trends," *National Vital Statistics Report*, 48:6 (April 24, 2000): 8, available online: http://www.cdc.gov/nchs/data/nvs48_6.pdf; Centers for Disease Control and Prevention, National Center for Health Statistics, National Vital Statistics System, *Teenage Births in the United States: National and State Trends, 1990-1996*, December 8, 1999, 9-10, available online: <http://www.cdc.gov/nchs/data/teenbrth.pdf>; California Department of Finance, Demographic Research Unit, *Race/Ethnic Population with Age and Sex Detail, 1970-2040*, December 1998, available online: <http://www.dof.ca.gov/HTML/DEMOGRAP/Race.htm>.

4. Young women diagnosed with chlamydia

This indicator represents the rates (per 100,000) and number of cases for females ages 15-19 diagnosed with chlamydia.

Chlamydia is a sexually transmitted disease with the highest prevalence in young adults and adolescents. It can cause a variety of long-term complications, including pelvic inflammatory disease (PID), abnormal pregnancy, infertility and chronic pelvic pain in women and pneumonia in newborns. It is the most common communicable disease reported in California and the United States.

California Trend*

	1996	1997	1998	1999
Rate (per 100,000)	1,833	1,936	2,048	2,122
Cases	18,764	20,176	22,380	23,898

* It is important to note that the increase in the rate of chlamydia among this age group may be a result of more successful chlamydia education, outreach, health programs and screening efforts, rather than behavioral changes within the population.

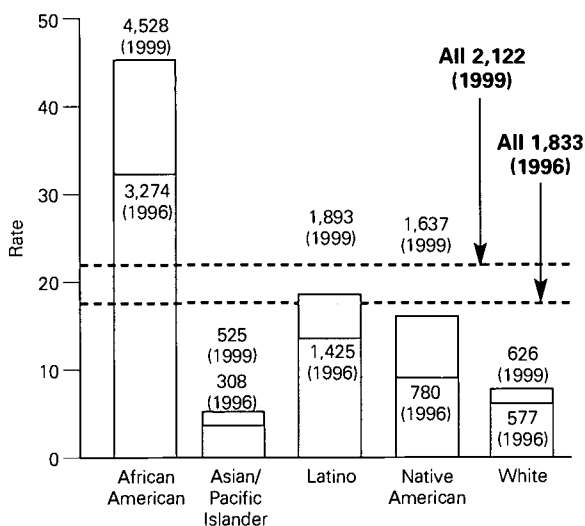

National Data: Data for this indicator by age group (15-19 year-old women) are not available at the national level. The rate of reported chlamydia cases for all women in the United States in 1998 was 382 per 100,000 women, compared to 316 per 100,000 women in 1995. In California, the chlamydia rate for all women was 371 in 1998, compared to 319 in 1995.

State Rank: Not available.

State Rank: Teen Births

Chlamydia Rates For 15-19 Year Old Women by Race/Ethnicity, California

Sources: California Department of Health Services, STD Control Branch, *Chlamydia, Cases and Rates by Race/Ethnicity, Gender and Age Group, 1996-1999*, June 5, 2000; Centers for Disease Control and Prevention, Division of STD Prevention, *Sexually Transmitted Disease Surveillance*, 1998, September 1999.

5. Smoking

This indicator represents the percentage of youth 12-17 years of age who smoked cigarettes within 30 days of the survey, as well as the percentage of 7th, 9th and 11th grade students who smoked cigarettes within 30 days of a different survey.

California Trend*

1. California DHS Telephone Survey

	1996	1997	1998	1999
12-17 year olds	11.0%	11.2%	10.7%	6.9%

2. California Department of Justice Written Survey

	1995-96	1997-98
7th grade	15.1%	13.4%
9th grade	28.2%	29.0%
11th grade	30.5%	29.3%

* The first set of data are taken from a California Department of Health Services (DHS) telephone survey of youth at home, while the second set of data is from a written in-school survey. The survey authors do not have a ready explanation for the different findings.

National Average: There is no direct comparison to the California figures cited above. However, below are national trend data on self-reported cigarette use by 8th, 10th and 12th graders, within 30 days of their response to a University of Michigan annual survey on cigarettes and drug use among youth:

	1996	1997	1998	1999
8th grade	21.0%	19.4%	19.1%	17.5%
10th grade	30.4%	29.8%	27.6%	25.7%
12th grade	34.0%	36.5%	35.1%	34.6%

State Rank: Not available.

6. Alcohol and drug use

This indicator represents the percentage of 7th, 9th and 11th grade students who report using alcohol or other illicit drugs in the past 30 days.

California Trend

7th grade	1995-96	1997-98
Alcohol	23.2%	21.7%
Other illicit drugs	13.3%	11.4%

9th grade	1995-96	1997-98
Alcohol	39.2%	37.5%
Other illicit drugs	29.4%	24.1%

11th grade	1995-96	1997-98
Alcohol	47.7%	46.9%
Other illicit drugs	30.8%	29.5%

National Average: There is no direct comparison to the California figures cited above. However, below are national trend data on self-reported alcohol and other drug use by 8th, 10th and 12th graders within 30 days of their response to the University of Michigan annual survey on cigarettes and drug use among youth:

8th Grade	1996	1997	1998	1999
Alcohol	26.2%	24.5%	23.0%	24.0%
Other illicit drugs	14.6%	12.9%	12.1%	12.2%

10th Grade	1996	1997	1998	1999
Alcohol	40.4%	40.1%	38.8%	40.0%
Other illicit drugs	23.2%	23.0%	21.5%	22.1%

12th Grade	1996	1997	1998	1999
Alcohol	50.8%	52.7%	52.0%	51.0%
Other illicit drugs	24.6%	26.2%	25.6%	25.9%

State Rank: Not available.

Sources: California Department of Justice, Office of the Attorney General, Crime and Violence Prevention Center, *Seventh Biennial California Student Substance Use Survey for Grades 7, 9, 11, 1997-98*, November 1998; University of Michigan, Survey Research Center, *Monitoring the Future Study*, 1999.

7. Mental health

This indicator represents the number of children and adolescents who need mental health services and the percentage served through state and federally funded programs.

California Trend

The number of children who need but receive no services is unknown since no one agency regularly compiles data on the incidence of mental disorders among children. A 1992 household survey on this issue conducted by the California State Department of Mental Health has not been updated. Based on survey results, the Department of Mental Health estimated that 445,000-623,000 children, or approximately 5-7% of California children,

were in need of special mental health services. More recent statewide data do exist for the number of children served through local county mental health programs and the number of children with mental health conditions served through the federal Individuals with Disabilities Education Act (IDEA):

California Mental Health Programs Children ages 0-17

	1994-95	1995-96	1996-97	1997-98
Children served	76,387	78,667	91,162	104,618
Percent of all children served	0.9%	0.9%	1.0%	1.1%
As percent of all persons served	22.0%	23.0%	25.2%	26.8%

California Mental Health Programs Children ages 13-17

	1994-95	1995-96	1996-97	1997-98
Children served	39,361	40,524	46,059	52,230
Percent of all children served	1.9%	1.9%	2.1%	2.3%
As percent of all persons served	11.3%	11.9%	12.7%	13.4%

The change between 1995 and 1998 represents a 37.0% and 32.7% increase in the number of children ages 0-17 and 13-17, respectively, served through local mental health programs. During this time, the number of children, ages 0-17 and 13-17, in California has increased by 5.9% and 8.4%, respectively.

Individuals with Disabilities Education Act Children and youth served, ages 6-17

	1995	1996	1997	1998
Mental retardation	22,907	24,141	25,056	26,360
Serious emotional disturbance	15,309	16,673	17,135	18,139

Individuals with Disabilities Education Act Children and youth served, ages 12-17

	1995	1996	1997	1998
Mental retardation	11,385	11,949	12,353	13,106
Serious emotional disturbance	10,546	11,687	12,235	12,875

The number of youth ages 6-17 and 12-17 served for serious emotional disturbance (SED) has increased 18.5% and 22.1%, respectively, between 1995 and 1998. This increase is significantly greater than the total increase in the California population ages 6-17 and 12-17 between 1995 and 1998, 11.3% and 8.1%, respectively.

National Average: Data for the number of children receiving services through mental health programs nationwide are not regularly compiled. A 1996 report on this issue completed by the U.S. Department of Health and Human Services, Center for Mental Health Services has not been updated. The report estimated that 5-9% of youth ages 9-17 in 1996 had "serious emotional disturbance and extreme functional impairment." The Center

Continued on next page

also estimated that 9-13% of youth ages 9-17 had "serious emotional disturbance, substantial functional impairment" and 20% had some "diagnosable disorder."

The following data provide national and historical information on the number of individuals receiving services through IDEA:

**Individuals with Disabilities Education Act,
U.S. Children and Youth Served, Ages 6-17**

	1995	1998
Mental retardation	494,569	524,481
Serious emotional disturbance	403,318	426,988

**Individuals with Disabilities Education Act,
U.S. Children and Youth Served, Ages 12-17**

	1995	1998
Mental retardation	270,488	289,339
Serious emotional disturbance	259,350	274,032

The number of youth ages 6-17 served for SED increased by 5.9% between 1995 and 1998. Youth ages 12-17 served for SED between 1995 and 1998 also increased by 5.7%. During this time, the total increase in the United States population ages 6-17 and 12-17 was 4.4% and 3.6%, respectively.

State Rank: Not available.

8. Prenatal care

This indicator represents the percentage of infants born to women who received no prenatal care during pregnancy, or only received care during the last trimester.

California Trend

	1995	1996	1997	1998
Percent	4.6%	3.8%	3.7%	3.6%

In 1998, 18,650 women (3.6%) did not receive prenatal care or began prenatal care until the third trimester of their pregnancy.

National Average: In 1998, 3.9% of women giving birth did not receive prenatal care or began prenatal care in the third trimester of their pregnancy. In 1995, the national average was 4.2%.

State Rank: In 1998, California ranked 27th of 50 states and the District of Columbia, a considerable improvement from its ranking of 44th in 1995.

Late/No Prenatal Care by Race/Ethnicity, California

Sources: Unpublished vital statistics data from California Department of Health Statistics, Office of Health Information and Research, Vital Statistics Section, May 2000; Centers for Disease Control and Prevention, National Center for Health Statistics, "Births: Final Data for 1998," *National Vital Statistics Report*, 48:3 (March 28, 2000): 64, available online: http://www.cdc.gov/nchs/data/nvs48_3.pdf; Centers for Disease Control and Prevention, National Center for Health Statistics, "Births: Final Data for 1995," *Monthly Vital Statistics Report*, 45:11S (June 10, 1997): 60, available online: http://www.cdc.gov/nchs/data/mv45_11s.pdf.

9. Low birthweight infants

This indicator represents the percentage of live births with birthweights less than 2,500 grams (5.5 lbs.).

California Trend

	1995	1996	1997	1998
Percent	6.1%	6.1%	6.1%	6.2%

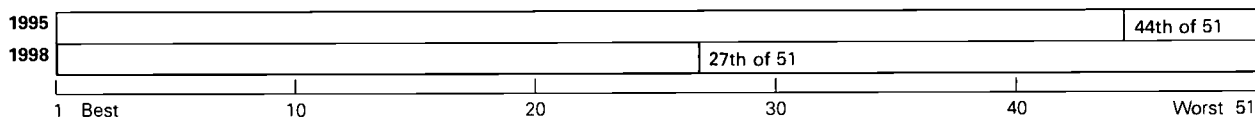

A total of 32,438 infants (6.2%) were born in California in 1998 weighing less than 2,500 grams.

National Average: In 1998, 7.6% of all live newborns in the United States weighed less than 2,500 grams, compared to 7.3% in 1995.

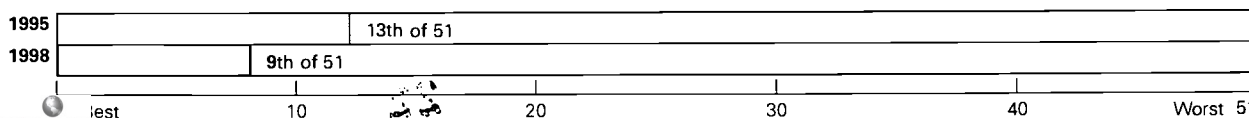

State Rank: In 1998, California ranked 9th of 50 states and the District of Columbia. In 1995, California ranked 13th among the 50 states and the District of Columbia.

10. Infant mortality

This indicator represents the number of infants who die in their first year of life per 1,000 live births.

California Trend

	1995	1996	1997	1998
Rate	6.3	5.9	5.9	5.7

State Rank: Infant Mortality

1995		13th of 51
1998	6th of 51	

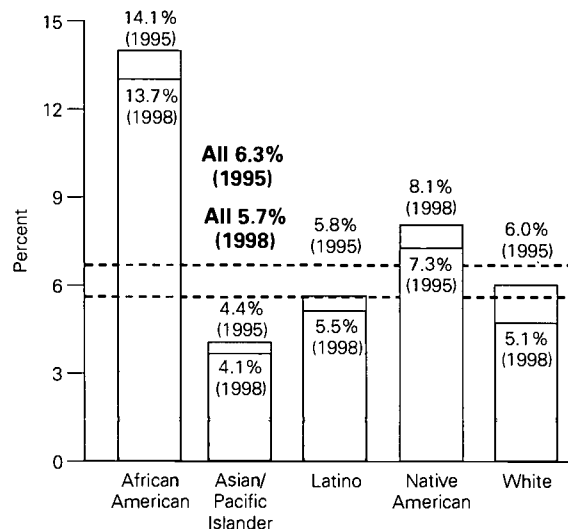

1 Best 10 20 30 40 Worst 51

In 1998, there were 2,994 infant deaths in California.

National Average: The infant mortality rate was 7.2 deaths per 1,000 live births in the United States in 1998, compared to 7.6 per 1,000 births in 1995.

State Rank: In 1998, California ranked 6th of 50 states and the District of Columbia. In 1995, California ranked 13th among the 50 states and the District of Columbia.

Infant Mortality by Race/Ethnicity, California

Sources: Unpublished vital statistics data from California Department of Health Statistics, Office of Health Information and Research, Vital Statistics Section, May 2000; Centers for Disease Control and Prevention, National Center for Health Statistics, "Deaths: Final Data for 1998," *National Vital Statistics Report*, 48:11 (July 24, 2000): 94, available online: http://www.cdc.gov/nchs/data/nvs48_11.pdf; Centers for Disease Control and Prevention, National Center for Health Statistics, "Deaths: Final Data for 1995," *Monthly Vital Statistics Report*, 45:11S2 (June 10, 1997): 71, available online: <http://www.cdc.gov/nchs/data/mv4511s2.pdf>.

11. Immunizations

This indicator represents the percentage of children ages 19-35 months who have received their 4:3:1:3 vaccination coverage.*

California Trend

	1996	1997	1998	1999
Percent	76.0%	74.0%	75.9%	75.3%

* The 4:3:1:3 series is four DTP (diphtheria, tetanus and pertussis) vaccines, three oral polio vaccines, one MMR (measles, mumps and rubella) vaccine, and 3 Hepatitis B vaccines. This series reflects the vaccination coverage recommended by the Department of Health and Human Services' "Healthy People 2000" health awareness initiative for children ages 19-35 months.

National Average: 78.4% of children 19-35 months were adequately immunized with the 4:3:1:3 vaccine series in 1999, according to the National Immunization Survey administered by the Centers for Disease Control and Prevention. In 1996, the first year of the survey, 77.0% were adequately immunized.

State Rank: California ranked 40th of 50 states and the District of Columbia in 1999. In 1996, California ranked 32nd.

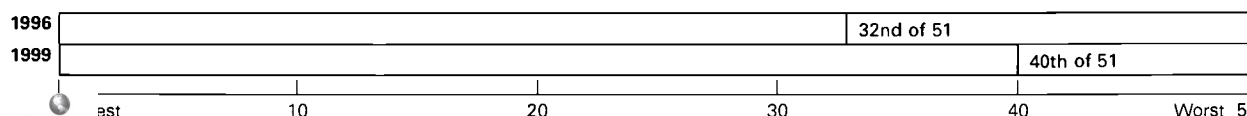

Immunization Rates Among Children 19-35 Months by Race/Ethnicity, California

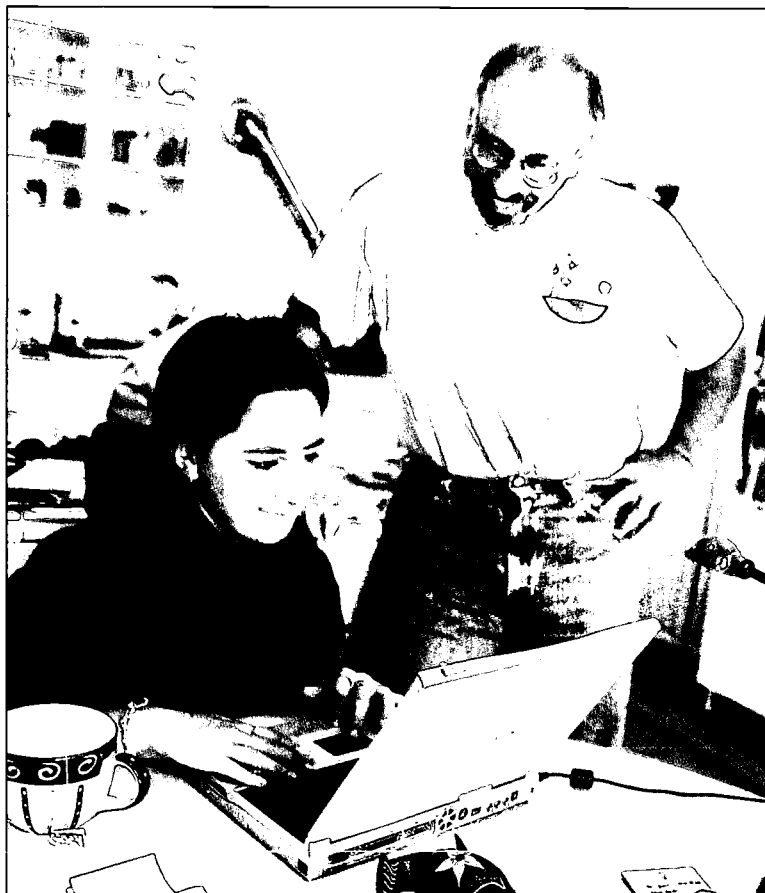

* Due to small numbers, reliable percentages are not available for children ages 19-35 months.

Education

Indicators

1. High school dropout rate
2. Graduates prepared for college
3. Reading and math skills
4. Per pupil expenditure
5. Pupil/teacher ratio
6. English Learner (EL) students
7. Babies born to mothers with less than 12 years education
8. Children in Head Start

1. High school dropout rate

This indicator represents the rate of 9th, 10th, 11th and 12th grade enrolled students who leave school and do not notify the school of a change of residence.

California Trend*

	1995-96	1996-97	1997-98	1998-99
Rate	3.9%	3.3%	2.9%	2.8%

* Existing data collection procedures allow only for the aggregate collection of dropout data and not the student-by-student count necessary for accurate dropout data estimates. Consequently, it is generally believed that the four-year derived dropout rate—the estimated percentage of students who drop out during a four-year period, 11.7% for 1998—may not accurately count, for example, students transitioning from junior high school to high school who do not enroll in any school.

Conversely, the graduation rate—the number of students receiving a high school degree out of all enrolled students four years earlier, 67.2% in 1999—may also be inaccurate due to the same inability (with the available data collections procedures) to account for enrollment changes and mobility.

The California Department of Education (CDE) hopes to obtain more accurate dropout and graduation estimates when the California School Information Services (CSIS) program is in place. CSIS is a program to support the development of standards for electronic student and school information systems that can be used to transfer students' records when they move and to facilitate reporting data to the state.

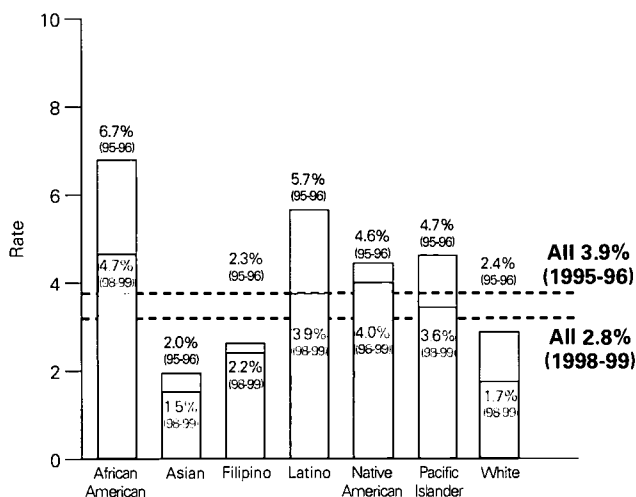

National Average: National figures are not comparable to California's dropout rate above. However, National Center for Education Statistics surveys estimate the high school completion rate of 18 through 24 year-olds for the U.S. to be 85.6% between 1996 and 1998, compared to 85.8% between 1993 and 1995.

California's high school completion rate for this age group during these years was 81.2% and 78.7%, respectively.

State Rank: Not available.

For the period 1996-1998, on the other hand, California ranked 46th of 50 states and the District of Columbia in the percentage of 18 through 24 year-olds who completed high school, compared to 51st for the period 1993-1995.

Annual High School Dropout Rate by Race/Ethnicity, California

3. Reading and math skills

This indicator represents the average proficiency in reading comprehension for 4th grade and in math skills for 8th grade public school students, as determined by National Assessment of Educational Progress (NAEP).

Reading Scores—4th graders:

The NAEP Reading (Main) Assessment rates students' reading proficiency on a scale of 0 to 500. The Assessment was not begun until 1992 and, since 1994, has been administered every 4 years. Students in the 4th grade must score at least 208 points to achieve a NAEP rank of "Basic" reading ability and a score of at least 238 to achieve a "Proficient" reading score. Students in the 4th grade who are proficient in reading are able to "demonstrate an overall understanding of the text, providing inferential and literal information," as well as "drawing conclusions, and making connections to their own experience."

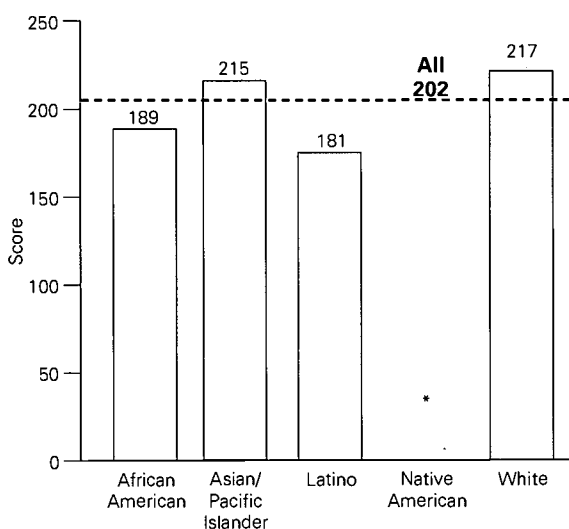

California Trend

	1992	1994	1998
Mean score	202	197	202
Percent proficient	19%	18%	20%

National Average: The national average was 215 in 1998, with 29% of students who completed the assessment achieving a "Proficient" score. In 1992, the national average was also 215, with 27% of students achieving a proficient score.

State Rank: In 1998 California ranked 36th of 39 states and the District of Columbia that participated in the assessment program in the percentage of students completing the assessment who received a score at or above "Proficient." In 1992, California ranked 31st of 35.

* The STAR program requires all California students in 2nd-11th grade to be tested each spring on basic academic skills and is distinct from NAEP tests.

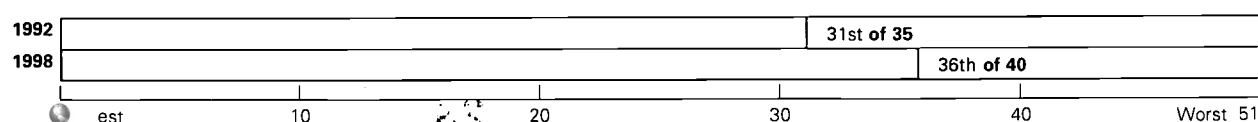

** Data analysis not yet available from California Department of Education.

Math Scores—8th graders:

The NAEP Math Assessment rates students' math proficiency on a scale of 0 to 500. The Assessment was not begun until 1990 and, since 1992, has been administered every 4 years. Students in the 8th grade must score at least 262 points to achieve a NAEP rank of "Basic" mathematics ability and a score of at least 299 to achieve a "Proficient" mathematics score. Students in the 8th grade who are proficient in mathematics are able to "demonstrate competency of challenging subject matter, including subject-matter knowledge, application of such knowledge to real-world situations, and analytical skills appropriate to the subject matter."

4. Per pupil expenditure

This indicator represents the expenditures for public elementary and secondary schools per pupil in average daily attendance.

California Trend

	1994-95	1995-96	1996-97	1997-98
Expenditure per pupil	\$4,799	\$4,924	\$5,327	\$5,627

National Average: The national average per pupil expenditure was estimated at \$6,638 during the 1997-1998 school year, compared to \$5,949 during the 1994-1995 school year.

State Rank: California ranked 40th of 50 states and the District of Columbia in per pupil expenditure during the 1997-1998 school year, the same ranking as for the 1994-1995 school year.

Source: Unpublished data from California Department of Education, Fiscal Planning Policy and Analysis, December 1997 and August 2000 (see also National Education Association, Research Division, *Ranking of the States*, 1999).

5. Pupil/teacher ratio

This indicator represents the average number of pupils in daily attendance per teacher in California public schools.

California Trend

Fall	1996	1997	1998	1999
Ratio	22.9	21.6	21.2	20.9

National Average: The national average pupil/teacher ratio was 16.8 during the Fall 1997 school year, compared to 17.3 during the Fall 1994 school year.

State Rank: California ranked 50th of 50 states and the District of Columbia in pupil/teacher ratio during the Fall 1997 school year, the same ranking as during the Fall 1994 school year.

Sources: California Department of Education, *DataQuest* (department data and statistical information extraction system), available online: <http://data1.cde.ca.gov/dataquest/>; U.S. Department of Education, National Center for Education Statistics, *Digest of Education Statistics*, 1999 (Washington, DC: May 2000).

6. English Learner (EL) students

This indicator represents the percentage of public school students identified through state-approved assessment procedures as English Learners (EL), formerly Limited-English Proficient. Also shown are the percentage of public school students who are Fluent-English Proficient (FEP) and the percentage of EL students who have been redesignated from Limited-English Proficient (English Learner) to Fluent-

2. Foster care
3. Gun violence
4. Motor vehicle fatalities and injuries
5. Incarcerated juveniles
6. Youth homicide

1. Child abuse and neglect

This indicator represents the number of children and rate per 1,000 children ages 0-17 who are reported incurring abuse (sexual, physical and emotional) and neglect.

California Trend*

	1995	1996	1997	1998
Number	458,262	463,072	480,443	413,372
Rate	52.1	52.2	53.7	46.4

* *California Trend* data are from the United States Department of Health and Human Services, 1995-1998, *Child Maltreatment Report*. Data in previous Children Now reports came from the California Department of Social Services, which does not have adequate data at this time for the most recent years.

National Average: In 1998, children were reported as victims of abuse and/or neglect at a rate of 41.5 per 1,000 children. In 1995, the rate was 43.0. Several states did not report data in 1998; other states did not report data in 1995. Consequently, rates across years are not comparable. Additionally, the national rate is not comparable to California's rate, since some states, including California, count each report of maltreatment as one case, regardless of the number of children involved. Other states use a child-based system that counts each child who is reported as being abused/neglected as a separate case.

State Rank: Not available.

Sources: United States Department of Health and Human Services, Administration on Children, Youth and Families, *Child Maltreatment 1998: Reports from the States to the National Child Abuse and Neglect Data System*

(Washington, DC: U.S. Government Printing Office, 2000); United States Department of Health and Human Services, Administration on Children, Youth and Families, *Child Maltreatment 1997: Reports from the States to the National Child Abuse and Neglect Data System* (Washington, DC: U.S. Government Printing Office, 1999); United States Department of Health and Human Services, Administration on Children, Youth and Families, *Child Maltreatment 1996: Reports from the States to the National Child Abuse and Neglect Data System* (Washington, DC: U.S. Government Printing Office, 1998); United States Department of Health and Human Services, Administration on Children, Youth and Families, *Child Maltreatment 1995: Reports from the States to the National Child Abuse and Neglect Data System* (Washington, DC: U.S. Government Printing Office, 1997).

2. Foster care

This indicator represents the number of children and rate per 1,000 children ages 0-17 who are in out-of-home care. Children who are under probation *and* in foster care (about 5,000 statewide) are excluded from these data.

California Trend*

Children ages 0-17

	1997	1998	1999
Number	96,192	102,097	103,024
Rate	10.4	10.8	10.7

Children ages 10-17

	1997	1998	1999
Number	38,255	41,852	45,265
Rate	10.4	11.1	11.7

* California transitioned to a new child welfare data collection system (Child Welfare Services/Case Management System-CWS/CMS) in 1997-1998. The increase in foster care caseload between these years may be a result of the conversion process.

Continued on next page

National Average: As of 1998, 39 states reported a total of 442,409 children ages 0-17 in foster care, a rate of 7.6 per 1,000 children. In 1996, 30 states reported a total of 322,746 children ages 0-17 in foster care, for a rate of 7.4 per 1,000 children.

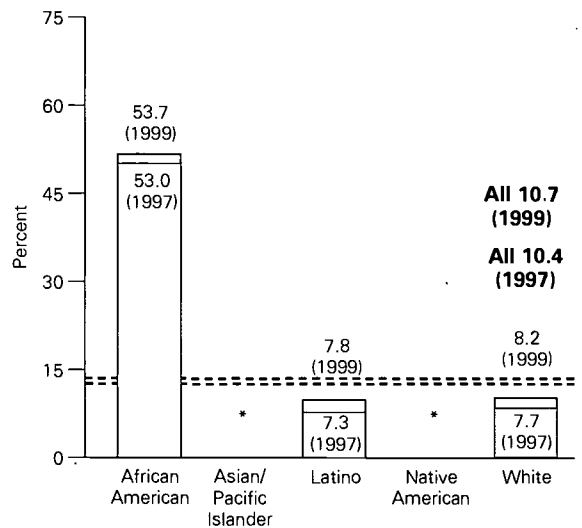

In 1998, 39 states reported a total of 226,979 children ages 10-17 in foster care, a rate of 8.8 per 1,000 children. In 1996, 30 states reported 157,473 in foster care, for a rate of 8.3 per 1,000 children.

State Rank:

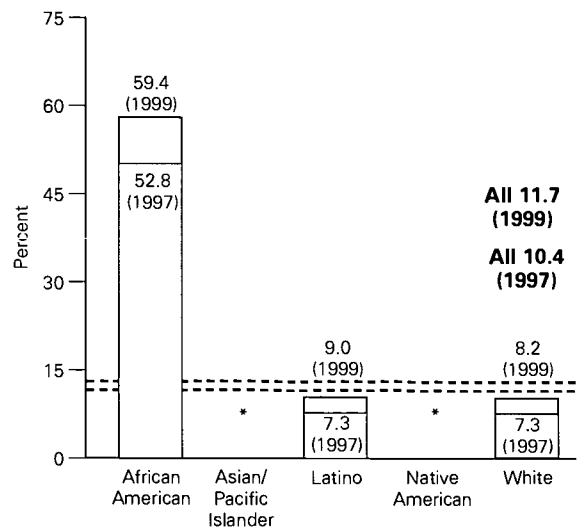

Children Ages 0-17: In 1998, California ranked 38th of 39 states reporting on the rate of children ages 0-17 in foster care, compared to 28th of 30 states reporting in 1996.

Children Ages 10-17: In 1998, California ranked 38th of 39 states, compared to 26th of 30 states in 1996.

State Rank: Motor Vehicle Fatalities, children ages 10-17

1995	9th of 51
1998	11th of 51

1 Best 10 20 30 40 Worst 51

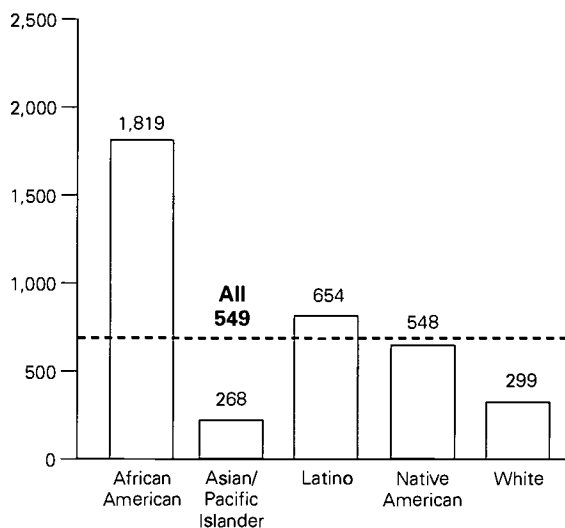

* In 1997, the Census of Juveniles in Residential Placement (CJRP) replaced the Census of Public and Private Juvenile Detention, Correctional, and Shelter Facilities, also known as the Children in Custody (CIC) census. Consequently, 1997 CJRP data are not directly comparable to earlier years. The CJRP is a biennial survey and collects more detailed data on juveniles in residential facilities.

National Average: In 1997, there were 105,790 juveniles in custody in the United States, a rate of 368 per 100,000.

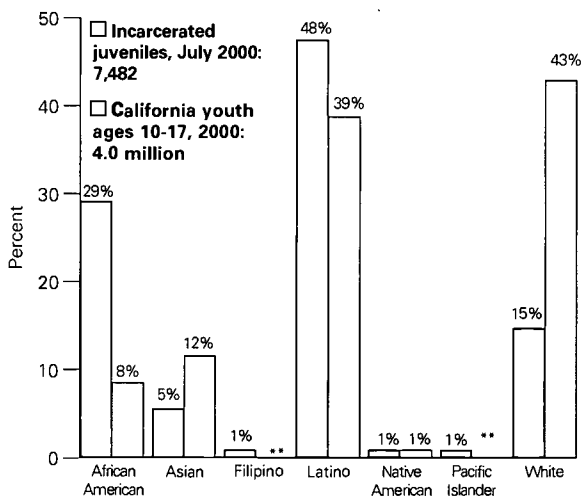

State Rank:

In 1997, California ranked 48th of 50 states and the District of Columbia in the rate of incarcerated juveniles. California ranked 36th among 37 states and the District of Columbia where the upper age limit is age 17 for juvenile court adjudication. In three states, the upper age limit is age 15, while in 10 states the upper age limit is age 16.

Juvenile Incarceration Rate per 100,000 Race/Ethnicity, California, 1997

Incarcerated Juveniles Assigned to California Youth Authority by Race/Ethnicity*

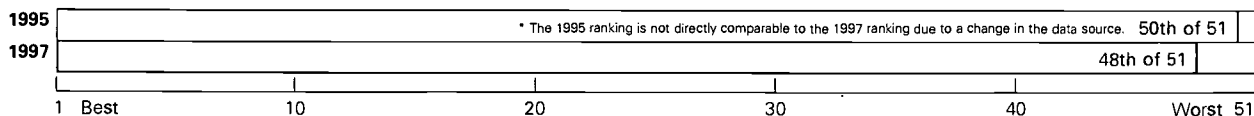

* Juveniles assigned to the California Youth Authority represent a portion of all incarcerated juveniles. Most incarcerated juveniles are held in juvenile halls and county camps within the county where the offense was committed. Youth are assigned to the California Youth Authority based on the offense committed, their past criminal history, and available residential placement options within the county where the offense was committed.

** These figures represent the percentage of children in California, ages 10-17, who are Latino, African American, etc. In 2000, the Asian subgroup includes Pacific Islander and Filipino youth.

State Rank*: Incarcerated Juveniles

6. Youth homicide

This indicator represents the number of homicide victims ages 0-17 and 10-17 and the homicide rate per 100,000 for these age groups.

California Trend:

Children Ages 0-17

	1995	1996	1997	1998
Number	509	413	391	316
Rate (per 100,000)	5.8	4.6	4.4	3.6

Children Ages 10-17

	1995	1996	1997	1998
Number	398	292	264	213
Rate (per 100,000)	11.4	8.2	7.3	5.8

National Average:

Homicides—Children ages 0-17

	1995	1998
Number	2,882	2,088
Rate (per 100,000)	4.2	3.0

Homicides—Children ages 10-17

	1995	1998
Number	1,962	1,197
Rate (per 100,000)	6.6	3.9

State Rank:

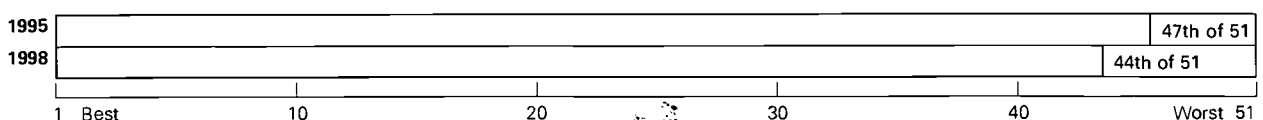

Children Ages 0-17: In 1998, California ranked 38th of 50 states and the District of Columbia in the rate per 100,000 of youth homicides of children ages 0-17. This is an improvement from California's ranking in 1995 of 45th of 51.

Children Ages 10-17: In 1998, California ranked 44th of 50 states and the District of Columbia, compared to 47th of 51 in 1995.

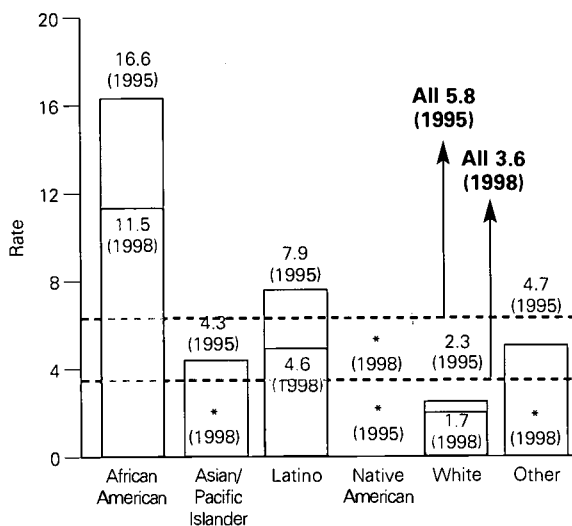

State Rank: Youth Homicide, children ages 0-17

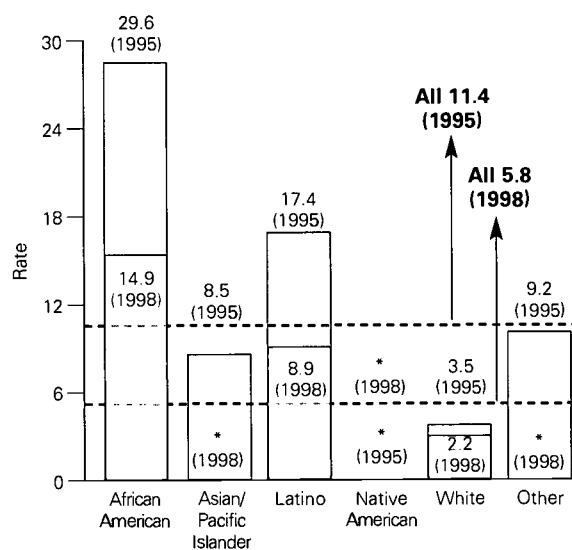

State Rank: Youth Homicide, children ages 10-17

Homicide Rate per 100,000 by Race/Ethnicity, California Children Ages 0-17

Homicide Rate per 100,000 by Race/Ethnicity, California Children Ages 10-17

* Due to small numbers, reliable rates cannot be calculated.

Note: A child is eligible for subsidized school meals if his or her parent's income is below 185% of the federal poverty level and only if an application for subsidized meals is requested and completed. Consequently, this data, the percent of enrolled school children eligible for free or reduced school meals, does not account for the number of children whose parents are below 185% of the federal poverty level but have not requested and/or completed an application for subsidized school meals.

* California transitioned to a new child welfare data collection system (Child Welfare Services/Case Management System - CWS/CMS) in 1997-1998. The increase in foster care caseload between these years may be an artifact of the conversion process.

** Due to small numbers reliable rates cannot be calculated—55 of 58 counties ranked.

Geovanny Fernandez researched and authored *California: State of Our Children 2000* under the direction of Amy Dominguez-Arms. The document was edited by Amy Dominguez-Arms, Mingyew Leung, Jessica Reich, Lois Salisbury, Shirin Shoai and Phyllis Willett. Valuable assistance was also provided by Edgar Cajina, Jand Davallou, Monica Van Steen, Sophia Spencer and Rosa Maria Vanegas. Children Now gratefully acknowledges the Annie E. Casey Foundation for generously supporting the production and printing of this report.

We would also like to acknowledge The Atlas Family Foundation, The Clorox Company Foundation, Gap Foundation, The James Irvine Foundation, The David and Lucile Packard Foundation and The Ralph M. Parsons Foundation for their support of our work.

Printed on recycled paper. October 2000.

CHILDREN NOW IS A NONPROFIT, INDEPENDENT VOICE for children, working to translate the nation's commitment to children and families into action. Children Now combines policy expertise and up-to-date information on children with communication strategies to reach parents, lawmakers, citizens, business, media and community leaders to generate positive change on behalf of children. With particular concern for those who are poor or at risk, Children Now is committed to improving conditions for all children. Founded in 1988, Children Now is a national organization with special depth in California.
